

# AIR HEATER

## INTELLIGENT BUILDING-HEATING

Demands on industrial components steadily have become more exacting, specifically in the field of air heating systems. Time and again, we have been setting new standards with our products, whether in terms of acoustics, power consumption or design features.

TROX TLT air-heaters with the Thermon<sup>®</sup> trademark are manufactured in a compact design and are available in a variety of product lines and with extensive accessories.

What is special about our air heaters: Thanks to simple "plug and play" installation they can be installed quickly and easily.

A compact local control panel provides a variety of settings, which allow temperature, flow rate, the weekly timer and the night mode to be easily controlled.

In summer operation, the system can pre-cool during the night and - by cooling the fresh air during the day - delay a further heating-up of the room. The result: a better indoor climate through more fresh air and much more comfort!

### Fields of application

Applications mainly include industrial and commercial-use environments such as sales premises, showrooms, business and production facilities, as well as open-plan offices, restaurants, shopping centers, assembly shops and warehouses.

Air heaters are available for indoor and outdoor installation. Take advantage of our experience and let our experts advise you individually!
